An ECG of a 63-year-old man who came into casualty with severe retrosternal chest pain of 2 hours’ duration is shown.

**QUESTION 1:** Which ONE of the following best describes this ECG:

a. Acute anterior ST elevation myocardial infarction (STEMI).
b. Acute anterior STEMI with RBBB.
c. Acute anterior and inferior STEMI with RBBB.
d. Acute pericarditis.
e. Acute infero-posterior and lateral STEMI.
f. Acute anterior STEMI with bifascicular block.
g. Other

**QUESTION 2:** Which of the following would you recommend:

a. Immediate thrombolytic therapy or primary PCI (if available).
b. Repeat the ECG first before thrombolytic therapy or primary PCI (if available).
c. Give NSAIDs and arrange an echocardiogram.

Please analyse the ECG carefully and commit yourself to an answer before checking the explanation.
