

This 32-year-old woman had had repeated episodes of rapid palpitations. She was otherwise well with no cardiac symptoms between attacks.

QUESTION 1: Which ONE of the following is the best ECG diagnosis?

- Right ventricular tachycardia with 1:1 VA conduction.
- Atrial flutter with left bundle branch block.
- Mahaim tachycardia.
- Antidromic atrioventricular re-entry tachycardia (AVRT).
- AV junctional re-entry tachycardia with LBBB.

QUESTION 2: Which ONE of the following interventions would be appropriate?

- Adenosine
- Amiodarone IV
- Carotid sinus massage
- Synchronised DC cardioversion

Please analyse the ECG carefully and commit yourself to an answer before checking the explanation.
