

This is the ECG of a 38 year-old woman who has been referred for the first time to the cardiac clinic for evaluation. She has a long history of effort related dyspnoea that has recently become much worse.

QUESTION: Which ONE of the following is the most likely diagnosis?

- (a) Missed Tetralogy of Fallot
- (b) Primum Atrial Septal Defect (ASD)
- (c) Chronic pulmonary thrombo-embolic disease
- (d) Mitral stenosis
- (e) Dilated cardiomyopathy with conduction disease
- (f) Kartegener's syndrome (bronchiectasis, dextrocardia, sinusitis, infertility)

Please analyse the ECG carefully and commit yourself to an answer before checking the explanation.
